

## Grade 8 Mathematics

The grade 8 mathematics assessment presents a variety of items representing the six strands of the Wisconsin Model Academic Standards for Mathematics: Mathematical Processes (*Reasoning, Communication, Connections, Representation, Problem Solving*), Number Operations and Relationships, Geometry, Measurement, Statistics and Probability, and Algebraic Relationships. Assessment items in each category may appear without context and within the context of real-world situations. All test items are either selected-response (multiple-choice) or constructed response format. Some items require the use of mathematical tools including a protractor, a ruler with 1/16 inch and millimeter intervals, and a calculator (four-function calculator availability is required for most sessions of the test). Students performing at each level draw on a broad range of mathematical knowledge while applying skills and strategies to solve real-world and nonroutine mathematical problems. Each proficiency level presumes mastery at previous levels. *The descriptions provide examples, rather than a complete list, of knowledge and skills students may demonstrate at each level.*

Performance Level	WKCE-CRT Performance Level Descriptions and Scale Score Ranges
<b>Advanced</b>  573 and above	<p><b>At the beginning of the year, students at the Advanced level demonstrate in-depth understanding of academic knowledge and skills tested on the WKCE-CRT by:</b></p> <ul style="list-style-type: none"> <li>• formulating and communicating mathematical representations used to solve mathematical problems.</li> <li>• clearly communicating justifications for solutions to problems.</li> <li>• selecting and communicating appropriate strategies to solve problems.</li> <li>• identifying equivalent forms of fractions, decimals and percents.</li> <li>• estimating the sum and difference of whole numbers and common fractions in problem solving situations.</li> <li>• calculating fractions and percents in the context of sales tax and discounts.</li> <li>• formulating and using number theory concepts of least common multiples.</li> <li>• identifying equivalent fractions and percents.</li> <li>• estimating the product of decimals by rounding to the nearest whole number .</li> <li>• naming three-dimensional figures using appropriate terminology (e.g. rectangular prism, square pyramid, cone, cylinder, and sphere).</li> <li>• determining the sum of angles of a polygon when the polygon is subdivided into triangles.</li> <li>• determining measurements of supplementary angles.</li> <li>• applying proportional reasoning to solve problems involving similar geometric figures (i.e. area, perimeter, length of sides).</li> <li>• identifying, locating or plotting coordinates of transformations of geometric figures on a four quadrant coordinate grid.</li> <li>• selecting appropriate units of measurement to estimate weight/mass.</li> <li>• converting units of measurement between US customary and metric systems of measurement.</li> <li>• measuring length to the nearest 1/16 inch or to the nearest millimeter.</li> <li>• measuring angles up to 360 degrees.</li> <li>• determining the volume and surface area of three dimensional figures such as rectangular prisms and cylinders in context.</li> <li>• finding the area of a circle.</li> <li>• calculating mean and median of a set of unordered data.</li> </ul>

Performance Level	WKCE-CRT Performance Level Descriptions and Scale Score Ranges
	<ul style="list-style-type: none"> <li>• describing real-world situations represented in a graph.</li> <li>• extending a numerical pattern or functional relationship involving multiplication and exponents without a calculator.</li> <li>• representing a numerical pattern with an algebraic equation.</li> <li>• translating a phrase or real-world problem into an algebraic expression.</li> <li>• determining equivalence of equations using the distributive property.</li> </ul>
<b>Proficient</b>  513 – 572	<p><b>At the beginning of the year, students at the Proficient level demonstrate competency in the academic knowledge and skills tested on the WKCE-CRT by:</b></p> <ul style="list-style-type: none"> <li>• using the vocabulary of mathematics, numbers, symbols, graphs or diagrams to explain the reasonableness of mathematical strategies.</li> <li>• demonstrating an understanding of percents and fractions within context of discounts.</li> <li>• adding and subtracting mixed numbers and fractions with unlike denominators.</li> <li>• multiplying mixed numbers in problem solving situations.</li> <li>• solving for the third angle of a triangle when given two interior angles.</li> <li>• determining supplementary and complementary angles.</li> <li>• demonstrating an understanding of similarity by finding the relationship between the sides of figures.</li> <li>• locating or plotting coordinates of a transformation of a point, including transformations across either axis, in a four quadrant coordinate grid.</li> <li>• converting units of measurement within a system of measurement (US customary or metric).</li> <li>• measuring length to the nearest 1/8 inch or millimeter.</li> <li>• measuring angles up to 180 degrees with appropriate tools.</li> <li>• calculating the volume of a rectangular prism.</li> <li>• solving problems involving area, perimeter and circumference.</li> <li>• comparing and interpreting data contained in double bar graphs.</li> <li>• determining the likelihood and probability of an event based on one or two dependent or independent events.</li> <li>• extending a numerical pattern in a functional relationship without a calculator.</li> <li>• solving a two-step algebraic equation without a calculator</li> <li>• evaluating an algebraic expression containing exponents without the use of a calculator</li> <li>• solving an equation that contains like-variables without the use of a calculator.</li> <li>• comparing equivalent expressions using the distributive property without the use of a calculator.</li> </ul>
<b>Basic</b>  483 –512	<p><b>At the beginning of the year, students at the Basic level demonstrate some academic knowledge and skills tested on the WKCE-CRT by:</b></p> <ul style="list-style-type: none"> <li>• communicating mathematical ideas used to solve real-world mathematical problems.</li> <li>• recognizing and applying place value concepts to whole numbers less than 100,000,000.</li> <li>• estimating the sum and difference of whole numbers, common fractions, and mixed numbers in problem solving situations.</li> </ul>

Performance Level	WKCE-CRT Performance Level Descriptions and Scale Score Ranges
	<ul style="list-style-type: none"> <li>• determining the measurements of complementary angles.</li> <li>• differentiating between multiple like-figures to determine congruency.</li> <li>• selecting appropriate tools of measurement for measuring capacity/volume.</li> <li>• measuring length to the nearest <math>\frac{1}{4}</math> inch or millimeter.</li> <li>• measuring angles up to <math>90^\circ</math> with the appropriate tools.</li> <li>• finding the area and perimeter of polygon.</li> <li>• reading, interpreting and analyzing data from bar graphs.</li> <li>• interpreting linear graphs.</li> <li>• determining the likelihood and probability of an event based on one independent event.</li> <li>• determining the number of combinations from a given set.</li> <li>• identifying missing terms or sequence of terms in a functional relationship without a calculator.</li> <li>• evaluating algebraic expressions containing two operations without a calculator.</li> <li>• using the commutative or associative properties to solve problems.</li> </ul>
<b>Minimal Performance</b>  482 and below	<p><b>At the beginning of the year, students at the Minimal level demonstrate very limited academic knowledge and skills tested on the WKCE-CRT by:</b></p> <ul style="list-style-type: none"> <li>• identifying mathematical problem solving strategies used to solve real-world mathematical problems.</li> <li>• identifying equivalent forms of fractions, decimals and percents without the use of a calculator.</li> <li>• estimating the sum and difference of whole numbers and common fractions in problem solving situations.</li> <li>• identifying right, acute and obtuse angles.</li> <li>• describing similar geometric figures.</li> <li>• identifying or locating coordinates of a point in a four quadrant coordinate grid.</li> <li>• identifying appropriate use of measurement to estimate length using US customary and metric units.</li> <li>• measuring with the appropriate tools to the nearest inch or centimeter.</li> <li>• measuring angles up to the nearest 5 degrees with appropriate tools.</li> <li>• estimating the distance between two points on a line segment using inches or centimeters.</li> <li>• determining circumference and diameter of a circle.</li> <li>• reading and interpreting a line graph.</li> <li>• listing the possible outcomes of an event.</li> <li>• extending numeric and geometric patterns.</li> <li>• solving simple one-step equations without a calculator.</li> <li>• evaluating algebraic expressions containing one operation without the use of a calculator.</li> <li>• identifying algebraic expressions using the commutative or associative properties.</li> </ul>
