

Extracting MARC records from WISCAT

Libraries can obtain a file of their WISCAT records in MARC format for use in a local automation system. This is referred to as an extraction. Extractions are done on request with a turnaround time of several days. The data can be sent directly from the WISCAT office to a library's vendor.

An extraction can also be useful if a library wants a report of their WISCAT holdings or partial holdings, such as a list of serial holdings. Reports are customizable by the WISCAT staff to include whatever bibliographic data and arrangement the library requires. The library receives the report in electronic form as a text file.

The cost of an extraction is \$75.00. For more information or to request an extraction, contact
